

WHAT IS CLAIMED IS:

1. A personal digital assistant with static electricity preventing function, comprising:

a chassis installed in the personal digital assistant serving as the 5 grounding for the personal digital assistant;

a touch panel module installed on the chassis; and

a metallic shielding piece which is installed on the touch panel module and comprises a grounding section on the side, wherein the grounding section comes into contact with the chassis.

10 2. The personal digital assistant according to claim 1, wherein the chassis is a metallic chassis.

3. The personal digital assistant according to claim 1, wherein the chassis is an electroplated chassis.

15 4. The personal digital assistant according to claim 1, wherein the grounding section clicks into the chassis such that the touch panel module is fixed to the chassis firmly.

5. The personal digital assistant according to claim 1, wherein the touch panel module comprises a printed circuit area used to contact the metallic shielding piece.

6. The personal digital assistant according to claim 5, wherein the metallic shielding piece further comprises a pressure-fixing section for pressing on and fixed to the printed circuit area.

7. The personal digital assistant according to claim 6, wherein the
5 pressure-fixing section is insulation-treated.

8. The personal digital assistant according to claim 7, wherein the pressure-fixing section is treated with lacquer coating.
